Version Control with Git and GitHub

No code should be written without some sort of version control. Not only does this help make your coding life easier, but it gives you work to show future employers. Unfortunately, often students will graduate without using version control even for their project code. This talk will be hands-on to show you how to start using version control today!

Please bring your laptops. The discussion will be on command line and IDE integration with GitHub.

Meeting and Talk:
The talk and meeting will be held on Thursday, Oct 31st, 2019 in ABH 002 from 3:15-4:15pm.

This meeting is open to all students of UMSL with interest in using version control. The talk should be understandable for anyone with an introductory knowledge of a development environment.

Refreshments will be provided.
If you have any questions, please contact Mark Hauschild at:
