Is your child between 8 and 13 years old?

Do you want to earn $50?

We are looking for research participants for a new study investigating mind-wandering in children using eye-tracking measures.

We are looking for children who:
- are 8-13 years of age
- have no history of neurological conditions (e.g. stroke) or psychiatric diagnoses (e.g. ADHD)
- are native English speakers

The study involves:
- your child filling out some questionnaires
- your child playing 2 computer games while we measure their eye movements
- you completing some questionnaires about your child

You will be compensated $50 for your time.

Please email Dr. Carissa Philippi’s lab (locans.umsl@gmail.com) or call our research assistant (Lillith Clark) for more info
